

TOBACCO ENGINEERING

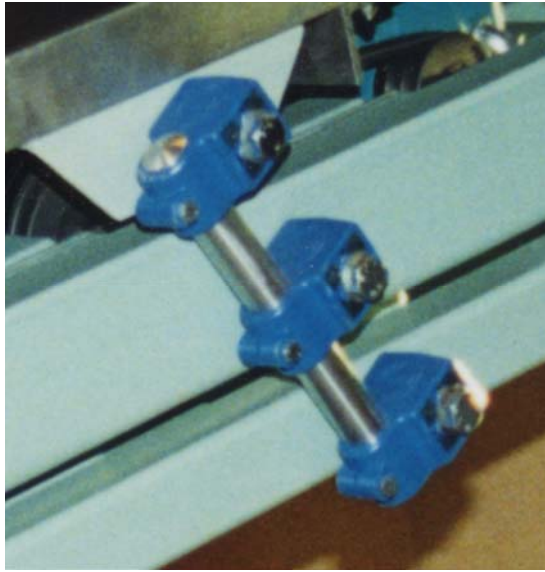

VIBRATORY CONVEYOR

The LTL Group are designers and manufacturers of process equipment for the world tobacco industry.

The LTL Vibratory Conveyor provides a means of conveying product where Band Conveyors would not be appropriate, e.g. discharge from process cylinders etc. The Conveyors are available in a number of configurations to suit each individual application as follows: –

- Normal upright construction.
- Inverted construction for feeding silos or where trap doors are required.
- Horizontal and inclined trays with horizontal ends as required.
- Serrated or plain, flat or troughed stainless steel tray.
- Available in a range of tray widths to suit product flow rate and density.

VIBRATORY CONVEYOR

'Rosta' Type AR Suspension Link

The LTL Vibratory Conveyor incorporates the 'Rosta' Type AR Suspension units which provide far greater flexibility in setting the machine and also allow the replacement of a single bush in the event of failure rather than the complete link.

A 'Rosta' ST drive head is also used for the eccentric drive connection to the tray drive bracket.
